Jumper Cable

Single Crystal Silver

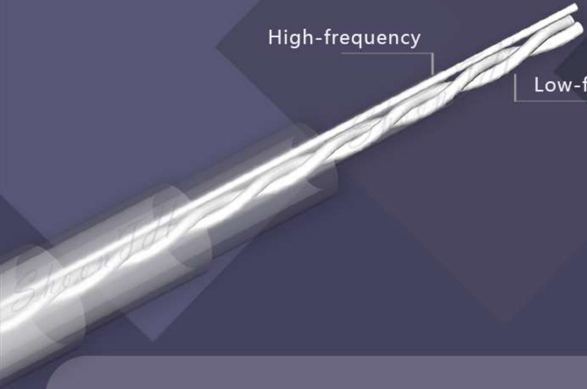
Accurate Jumper Cable features a custom wire core with high frequency and low frequency.

It adopts DNA-chain suspension weaving technology, so that the overall wire is more durable to use, the sound effect is better, and the HiFi quality is more powerful.

Frequency Division Conduction

The high and low frequencies adopt independent channels.

The calculated diameter is applicable to the high-frequency core, which is processed independently from the low-frequency core. This technology will make the whole frequency band sound more balanced, and reduce the peaks and valleys of the frequency band curve.



High-frequency
Low-frequency

-196℃ Three-Stage Freezing Treatment

The whole cable and plugs are processed by three stages freezing treatment at -196℃.

This method can effectively improve the metal grain gap and structure, and greatly improve the probablity of electron scattering, thereby improving electrical conductivity.
