[Gold Wrapped Monocrystal Silver Core]

The gold is wrapped in monocrystal silver, which is very different from the plated ones. The thickness of gold is almost twenty times that of ordinary ones.

[Cotton Yarn Fiber Sleeve]

The cotton yarn fiber shockproof sleeve and silicone tube can greatly absorb vibration and reduce vibration transmission.

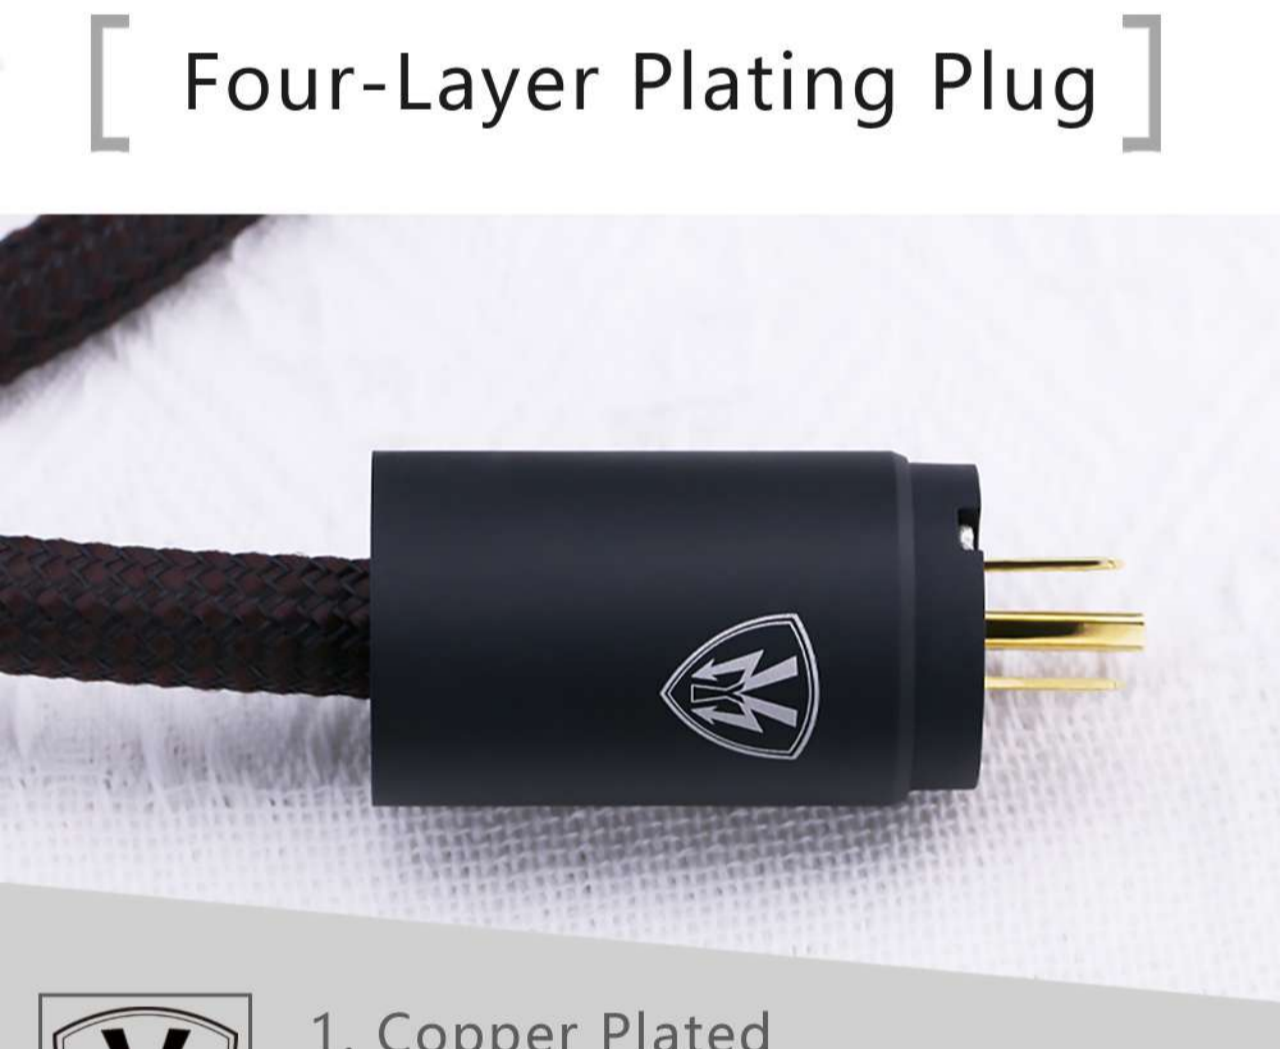

[Double Shielding Forms]

The double shielding forms can

- > absorb external vibration effectively
- > isolate the external vibration conducted to the core
- > reduce the distortion of music details

[Double Absorbing Brackets]

Invention patents number: 201811287781.1

The Glorious Power Cable uses several different absorbing brackets materials to form support structure. This can effectively absorb electromagnetic interference and mechanical vibration interference.

The Glorious Power Cable optimizes the absorbing supports' material and structure, so as to broaden the range of electromagnetic wave absorption functions.

[-196°C Three-Stage Low-Temperature Freezing Treatment]

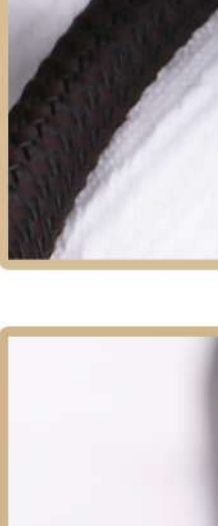

Invention patents number: 202110279086.6

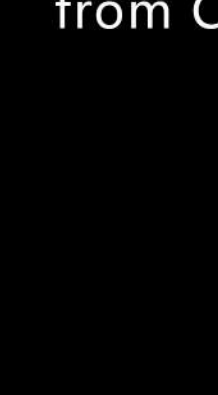

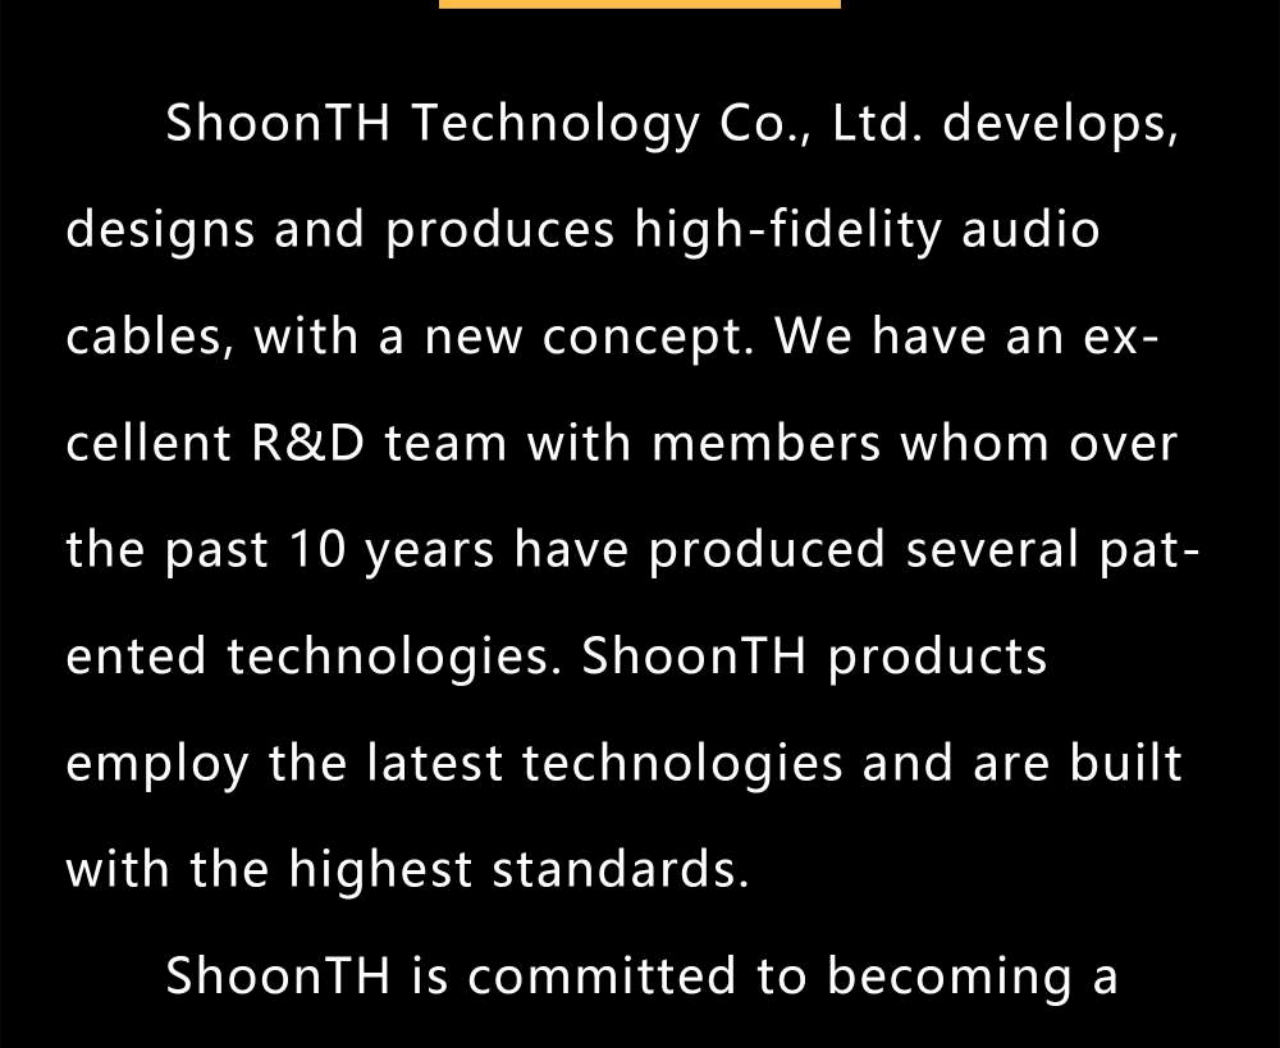

The whole cable and plugs are processed by three stages Cryo-treatment at -196°C. Three-stage Cryo treatment, can strengthen the metal structure to be a long crystalline state, which is smoother than before, so as to increase the rigidity of metal, and stability of electron mobility.

[Silicone Shockproof Sleeve]

ShoonTH originally use silicone shockproof sleeve. This process method can make the whole cable softer, and more resistant to high temperature and high pressure. It can greatly absorb vibration and reduce vibration transmission. Relatively speaking, the insulation coefficient is better.

[Four-Layer Plating Plug]

1. Copper Plated
2. Silver Plated
3. Palladium Plated
4. 24K Gold Plated

[Original Design Splitter and Plug Shell]

[Air Insulation]

The air insulation can reduce the direct contact surface between the core and the insulator. The sound of Glorious wires using air insulation technology will be clearer and more real. The music details will be relatively richer.

※Other lengths can be customized

SHOONTH Company Profile

ShoonTH Technology Co., Ltd. develops, designs and produces high-fidelity audio cables, with a new concept. We have an excellent R&D team with members whom over the past 10 years have produced several patented technologies. ShoonTH products employ the latest technologies and are built with the highest standards.

ShoonTH is committed to becoming a leading high-fidelity cable brand, originating from China.
