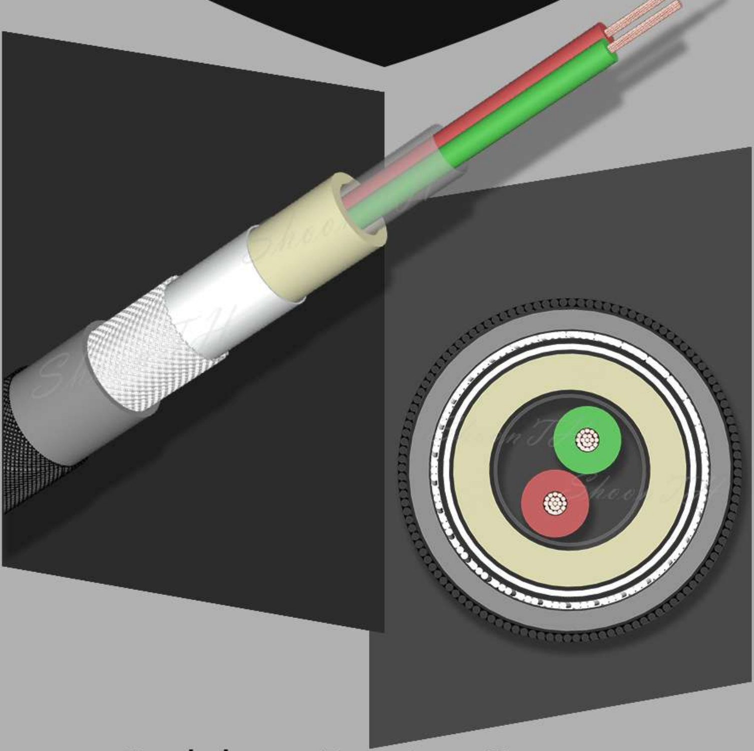
RCA Cable

- Exploring -

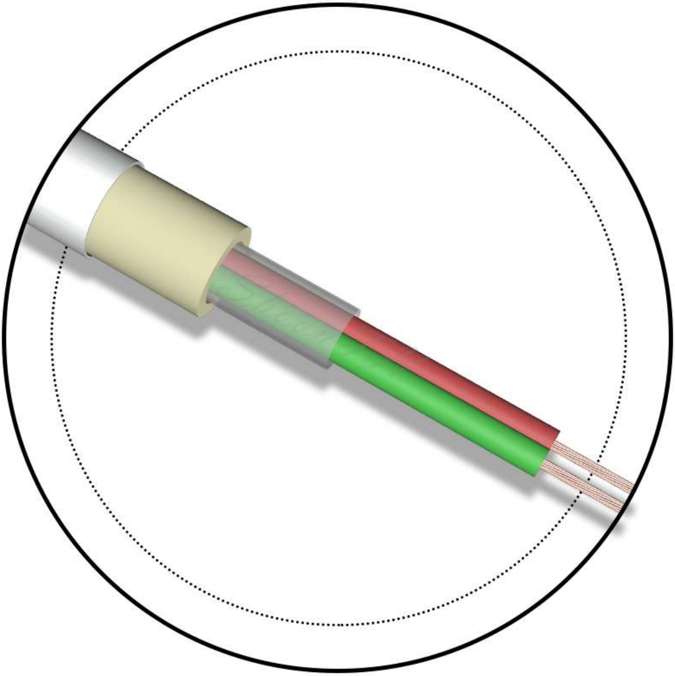


Golden Ratio Copper

Golden ratio copper is an excellent copper alloy conductor.

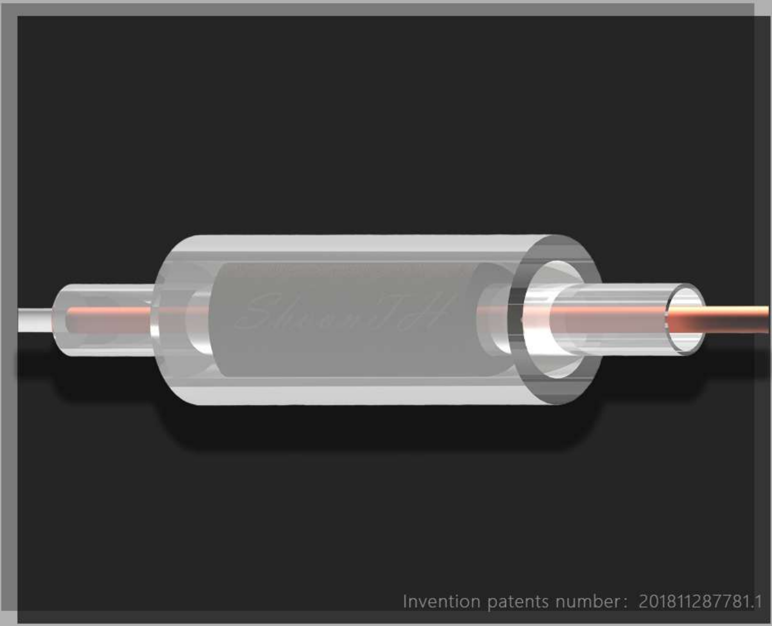
It has the unique sound emotion and low frequency thickness of copper material. At the same time, it has the high-frequency extended sense of hearing of gold material.

Twisted Structure



The core is wrapped with a PE foam insulation layer, which is resistant to high temperature and reduces the impact of temperature changes on the conduction.

Absorbing Rings



Invention patents number: 201811287781.1

The Exploring RCA Cable uses absorbing rings technology.

This can make the music background more quiet and dark. The horizontal width and vertical depth of the sound stage clearer and more accurate.

-196℃ Three-Stage Low-Temperature Freezing Treatment

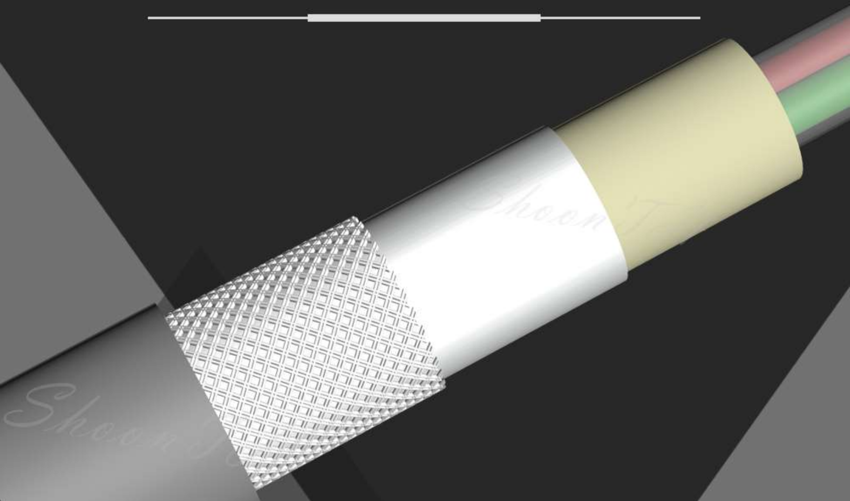
ShoonTH
Exploring

Invention patents number：202110279086.6

The whole cable and plugs are processed

by low-temperature freezing treatment at -196℃.This method can effectively improve the metal grain gap and structure, and greatly improve the probablity of electron scattering, thereby improving electrical conductivity.

Double Shielding Forms



There are two layers of shielding inside and outside the core base, including an oxygen-free copper tinned shield and an aluminum foil shield.

They can reduce external interference and reduce music conduction distortion.

Cotton Yarn Fiber Sleeve

The cotton yarn fiber shockproof sleeve and silicone tube can greatly absorb vibration and reduce vibration transmission.

SHOONTH

Company Profile

ShoonTH Technology Co., Ltd. develops, designs and produces high-fidelity audio cables, with a new concept. We have an excellent R&D team with members whom over the past 10 years have produced several patented technologies. ShoonTH products employ the latest technologies and are built with the highest standards.

ShoonTH is committed to becoming a leading high-fidelity cable brand, originating from China
