## [ Gold Wrapped Monocrystal Silver Core ]

The gold is wrapped in monocrystal silver, which is very different from the plated ones. The thickness of gold is almost twenty times that of ordinary ones.

The core of Pro version adopts optimization technology and adds ultra-low frequency channel. The overall sound presentation has been improved by more than 100%.

## [ Frequency Division Conduction Technology ]

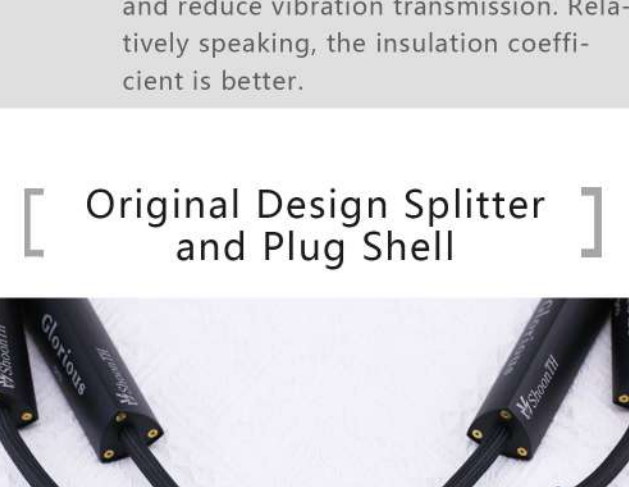

The calculated diameter is applicable to the high-frequency core, which is processed independently from the low-frequency core. This technology will make the whole frequency band sound more balanced, and reduce the peaks and valleys of the frequency band curve.

## [ Double Shielding Forms ]

The double shielding forms can

- > absorb external vibration effectively
- > isolate the external vibration conducted to the core
- > reduce the distortion of music details

## [ Double Wave-Absorbing Brackets ]

Invention patents number: 201811287781.1

The Glorious uses double wave-absorbing brackets technology. This can effectively isolate the high-frequency electromagnetic interference, and reduce the distortion caused by external vibration on core conduction.

The Pro version optimizes the absorbing brackets' material and structure, so as to broaden the range of electromagnetic wave absorption functions.

## [ -196°C Three-Stage Low-Temperature Freezing Treatment ]

Invention patents number: 202110279086.6

The whole cable and plugs are processed by three-stages low-temperature treatment at -196°C. Three-stage low-temperature treatment can effectively improve the metal grain gap and structure, and greatly improve the probability of electron scattering, thereby improving electrical conductivity.

## [ Silicone Shockproof Sleeve ]

ShoonTH originally use silicone shockproof sleeve. This process method can make the whole cable softer, and more resistant to high temperature and high pressure. It can greatly absorb vibration and reduce vibration transmission. Relatively speaking, the insulation coefficient is better.

## [ Original Design Splitter and Plug Shell ]

Rhodium plating plug  
This can make the whole cable get better presentation in medium and high frequency.

## [ Photographs ]

※Other lengths can be customized

## SHOONTH Company Profile

ShoonTH Technology Co., Ltd. develops, designs and produces high-fidelity audio cables, with a new concept. We have an excellent R&D team with members whom over the past 10 years have produced several patented technologies. ShoonTH products employ the latest technologies and are built with the highest standards.

ShoonTH is committed to becoming a leading high-fidelity cable brand, originating from China.
